Subject: Sir/Madam,

Sir/Madam,

      Microsoft by tying Internet Explorer and Windows killed the Innovative product Netscape. Now Microsoft trying to bundle more services with XP to kill competition in other areas. The settlement announced Nov. 2 is inadequate and the company will be able to bypass many of the sanctions as it did in the earlier case in 1995 and hence brought this case in 1998 and the courts have unanimously found that Microsoft violated antitrust laws.

      The company had reached a deal to settle a raft of private anti-trust cases to spend more than $1bn to put software and computers into some of the poorest American schools. The deal will close another chapter in the software giant's legal saga, while helping Microsoft make further inroads into the nation's schools, which once were dominated by its rival Apple Computer Inc. and will reach future customers mind at the early age.

      I do not think the remedy should be a mechanism by which Microsoft can further extend its monopoly.

Thanks & Bye
